

# Alcester Academy Eco Code

## Our Vision

At Alcester Academy, we are committed to a sustainable future through two core pillars: **Awareness** and **Action**.

---

### Awareness: Understanding Our Impact

*At Alcester Academy, we believe that change begins with a deep understanding of our environment. We foster this mindset through:*

- **Curriculum Integration:** Immersing ourselves in sustainability topics across all subjects to see the "big picture" of environmental science.
- **Resilient Leadership:** Empowering students to take lead of the Academy Sustainability-Committee, where we embrace challenges as opportunities to grow and innovate.
- **Ethical Dialogue:** Refining our personal values and integrity through respectful debate about green solutions and ecological ethics.
- **Collaborative Learning:** Partnering with local experts and our community to broaden our perspective on both Alcester's local ecology and global climate issues.

---

### Action: Leading Sustainable Change

*Staff and students at Alcester Academy are committed to taking measurable steps toward a greener future and a reduced carbon footprint:*

- **Environmental Advocacy:** Championing meaningful improvements in how our Academy manages energy consumption, food sources, and sustainable travel.
- **Biodiversity Stewardship:** Teaming up with local partners to actively protect and enhance the natural habitats within Alcester and our surrounding community.
- **Waste Transformation:** Revolutionizing our approach to food provision by drastically cutting down on waste and promoting sustainable eating habits.
- **Resource Conservation:** Taking personal and collective responsibility for lowering our water and electricity usage through smart monitoring and school-wide efficiency projects.
- **Peer Empowerment:** Supporting one another in making eco-friendly daily choices, while building a culture of empathy and open, flexible communication.

SUSTAINABILITY
