Departmo Mathema		Year Group: 9 to 11		STATISTICS & FURTHER MATHS			
Term	Topic/ subject	Assessment Objectives	Knowledge acquisition	Skill building	Wider reading opportunities to include numeracy and SMSC	Final assessment task and title	SEND & PP
Autumn year 1	The collection of data Processing, representing and analysing data	1(a) Planning 1(b) Types of data 1(c) Population and sampling 2(h) Estimation 1(d) Collecting data 2(a) Tabulation and diagrams 2(a) Representing data	Knowledge acquisition will be developed through the building of prior knowledge, revisiting skills covered, and through regular quick fire assessments throughout the term.	The collection of data 1(a) Planning Hypotheses Designing investigations Strategies to deal with potential problems 1(b) Types of data Describing data Raw data, quantitative, qualitative, categorical, ordinal, discrete, continuous, ungrouped, grouped, bivariate and multivariate Advantages and implications of merging/grouping data Primary/secondary data Advantages and disadvantages 1(c) Population and sampling Population, sample frame and sample Judgment, opportunity (convenience) and quota sampling Random, systematic and quota sampling Advantages of each method Techniques to avoid bias Stratified sampling	Bias and the implications of media bias can be introduced. The UK census allows students to develop an awareness of the wider culture. Internet research can lead to discovery of statistical facts and figures used in every day life for instance the recent covid experiences with the ways in which the data can be represented or misrepresented. Use of key words: Sample, population, fraction, decimal, percentage, bias, stratified sample, random, cumulative frequency, box plot, histogram, frequency, mean, median, mode, range, lower quartile, upper quartile,	October end of half term assessment – covers content studied only December end of term assessment – covers content studied only	High levels of maths knowledge are a prerequisite for this course, however students will have opportunities for stretch and challenge in every area covered through higher tier only elements of the course such as Unequal width Histograms, Geometric mean and weighted mean, skewness, Standard deviation, Spearman's rank, types of distribution and Price indexes.

2(h) Estimation interquartile range,	
Use summary statists to make estimates of population characteristics spread, comparison, outlier	
Use sample data to predict population proportions	
Know that sample size has an impact on reliability and replication	
Apply Petersen capture recapture formula to calculate an estimate of the size of a population	
1(d) Collecting data	
Collection of data	
Experimental (laboratory, field and natural), simulation, questionnaires, observation, reference, census, population and sampling	
Reliability and validity	
Collecting sensitive content matter	
Random response	
Questionnaires and interviews	
Leading questions, avoiding biased sources, time factors, open/closed questions, different types of interview technique	
Problems with collected data	
Missing data, non-response, 'cleaning' data	
Controlling extraneous variables	
Control groups	
2. Processing, representing and analysing data	
2(a) Tabulation	
Tally, tabulation, two-way tables	
Frequency tables	
2(a) Representing data	
Pictogram	

<u> </u>	
	Bar charts
	Pie chart
	Stem and leaf diagram
	Population pyramid
	Choropleth map
	Comparative pie chart
	Comparative 2D representations/comparative 3D representations.
	Interpret and compare data sets represented pictorially
	Line graphs
	Bar line (vertical line) charts
	Frequency polygons
	Cumulative frequency (discrete and grouped) charts
	Histograms (equal class width)
	Box plots
	Interpret and compare data sets represented graphically
	Histograms unequal class widths
	Frequency density
	Interpret and compare data sets displayed in histograms
	2(a) Representing data
	Justify appropriate form to represent data
	Graphical misrepresentation
	Determine skewness by inspection
	Interpreting a distribution of data with reference to skewness
	Calculating skewness
	Comparing data sets represented in different formats

Spring year 1	2. Processing, representing and analysing data	2(b) Measures of central tendency 2(c) Measures of dispersion 2(e) Scatter diagrams and correlation 2(f) Time series	Knowledge acquisition will be developed through the building of prior knowledge, revisiting skills covered, and through regular quick fire assessments throughout the term.	2(b) Measures of central tendency Averages from raw or grouped data Mean, median, mode Weighted mean Geometric mean Justify appropriate average to use in context 2(c) Measures of dispersion Range, quartiles, interquartile range (IQR), percentiles Interpercentile range, interdecile range Standard deviation Identifying outliers by inspection Identifying outliers by calculation Comment on outliers in context Compare data sets using appropriate measure of central tendency and measure of dispersion 2(e) Scatter diagrams and correlation Explanatory (independent) variables and response (dependent) variables Correlation Positive, negative, zero, weak, strong Distinction between correlation and causation Line of best fit Using the regression equation y= a+ bx Calculate Spearman's rank correlation coefficient Interpret Spearman's rank in context	Bias and the implications of media bias can be introduced. The UK census allows students to develop an awareness of the wider culture. Internet research can lead to discovery of statistical facts and figures used in every day life for instance the recent covid experiences with the ways in which the data can be represented or misrepresented. Use of key words: Sample, population, fraction, decimal, percentage, bias, stratified sample, random, cumulative frequency, box plot, histogram, frequency density, frequency, mean, median, mode, range, lower quartile, upper quartile, interquartile range, spread, comparison, outlier	February half term assessment – GCSE assessment with only content covered Easter Assessment - GCSE assessment with only content covered	High levels of maths knowledge are a prerequisite for this course, however students will have opportunities for stretch and challenge in every area covered through higher tier only elements of the course such as Unequal width Histograms, Geometric mean and weighted mean, skewness, Standard deviation, Spearman's rank, types of distribution and Price indexes.

				Interpret Pearson's product moment correlation coefficient (PMCC) in context			
				Understand the distinction between Spearman's rank correlation coefficient and Pearson's product moment correlation coefficient (PMCC)			
				2(f) Time series			
				Moving averages Identifying trends			
				Interpreting seasonal and cyclical trends in context			
				Mean seasonal variation			
				Predictions using average seasonal effect			
Summer year 1	3. Probability	3. Experimental and theoretical probability 2(d) Further summary statistics	Knowledge acquisition will be developed through the building of prior knowledge, revisiting skills covered, and through regular quick fire assessments throughout the term.	3. Probability 3. Experimental and theoretical probability Likelihood Expected frequency of a specified characteristic within a sample or population Use collected data and calculated probabilities to determine and interpret risk Compare experimental data with theoretical predictions Understand that increasing sample size generally leads to better estimates of probability and population parameters. Use two-way tables, sample space diagrams, tree diagrams and Venn diagrams to represent all the different outcomes possible for at most three events. Independent events Conditional probability	Through exploring probability students will develop an awareness of fairness both in a mathematical; context and in real-life scenarios. Use of key words : Probability, dependent, independent, conditional, tree diagrams, sample space, outcomes, theoretical, relative frequency, fairness, experimental	Summer assessment - GCSE assessment with only content covered	High levels of maths knowledge are a prerequisite for this course, however students will have opportunities for stretch and challenge in every area covered through higher tier only elements of the course such as Unequal width Histograms, Geometric mean and weighted mean, skewness, Standard deviation, Spearman's rank, types of distribution and Price indexes.

Autumn year 2	2. Processing, representing and analysing data	2(c) Standardised scores 2(g) Quality assurance 3. Probability distributions Revision - GCSE Statistics	Knowledge acquisition will be developed through the building of prior knowledge, revisiting skills covered, and through regular quick fire assessments throughout the term.	$2(d) \ Further \ summary \ statistics$ $Index \ numbers \ / \ weighted \ index \ numbers$ $Retail \ price \ index \ (RPI)$ $Consumer \ price \ index \ (CPI)$ $Gross \ domestic \ product \ (GDP)$ $Interpret \ data \ related \ to \ rates \ of \ change$ $over \ time \ when \ given \ in \ graphical \ form$ $Calculate \ and \ interpret \ rates \ of \ change \ over$ $time \ from \ tables \ using \ context \ specific$ $formula$ $3. \ Probability \ distributions$ $Binomial \ distribution$ $Notation \ B(n,p)$ $Conditions \ that \ make \ binomial \ model \ suitable$ $Mean \ (np)$ $Calculation \ of \ binomial \ probabilities$ $Normal \ distribution$ $Notation \ N(\mu,\sigma 2)$ $Characteristics \ of \ Normal \ distribution$ $Conditions \ that \ make \ Normal \ model \ suitable$ $Approximately \ 95\% \ of \ the \ data \ lie \ within \ two \ standard \ deviations \ of \ the \ mean \ and \ that \ 68\% \ (just \ over \ two \ thirds) \ lie \ within \ one \ standard \ deviation \ of \ the \ mean$ $2(c) \ Measures \ of \ dispersion$ $Standardised \ scores$ $2(g) \ Quality \ assurance$	Use of all previous key words and terminology.	October end of half term assessment – Full GCSE Statistics paper. December end of term assessment – just covering topics covered in Further Maths	High levels of maths knowledge are a prerequisite for this course, however students will have opportunities for stretch and challenge in every area covered through higher tier only elements of the course such as Unequal width Histograms, Geometric mean and weighted mean, skewness, Standard deviation, Spearman's rank, types of distribution and Price indexes. All topics in Further Maths extend beyond the GCSE Maths course.

_		,		1	, ,
			Know that a set of sample means are more		
			closely distributed than individual values		
			from the same population.		
			Control charts		
			Use action and warning lines in

				recall and use the formula × base × height for area of a triangle use the formula absinC for area of a triangle recall and use formulae for circumference and area of a circle recall and use formulae for volume of a cube, a cuboid, prisms and pyramids use formulae for volume of a cone and of a sphere understand and use angle properties of parallel and intersecting lines understand and use angle properties of triangles and special types of quadrilaterals and polygons understand and use circle theorems construct formal proofs using correct mathematical notation and vocabulary understand and use the formulae for sine rule and cosine rule use a combination of the skills required in order to manipulate and simplify rational algebraic expressions		
Spring year 2	Further maths crossover elements with GCSE maths	Manipulation and proof Linear and Quadratic equations.	Knowledge acquisition will be developed through the building of prior knowledge, revisiting skills covered, and through regular quick fire assessments throughout the term.	change the subject of a formula, where the subject appears on one or both sides of the formula manipulate formulae and expressions show how one side of an identity can be manipulated to obtain the other side of the identity show that an expression can be manipulated into another given form prove given conditions for algebraic expressions complete the square for any quadratic function of the form $ax^2 + bx + c$ where a, b and c are integers solve quadratic equations by completing the square equate coefficients to obtain unknown values solve linear equations solve quadratic equations by factorisation, by graph, by completing the square or by formula	February half term GCSE Further Maths assessment with only content covered. Easter – Full GCSE Statistics paper.	High levels of maths knowledge are a prerequisite for this course, however students will have opportunities for stretch and challenge in every area covered through higher tier only elements of the course such as Unequal width Histograms, Geometric mean and weighted mean, skewness, Standard deviation, Spearman's rank, types of distribution and Price indexes. All topics in Further

				All topics reviewed in preparation for			Maths extend
	Revision of GCSE Statistics			external examination in GCSE Statistics.			beyond the GCSE Maths course.
Summer year 2	Revision	Revision	Knowledge acquisition will be developed through the building of prior knowledge, revisiting skills covered, and through regular quick fire assessments throughout the term.	Revision of GCSE Statistics through exam paper practice and recapping of topics.	Use of all previous key words and terminology from the GCSE Statistics elements of this course.	External examination – GCSE Statistics	High levels of maths knowledge are a prerequisite for this course, however students will have opportunities for stretch and challenge in every area covered through higher tier only elements of the course such as Unequal width Histograms, Geometric mean and weighted mean, skewness, Standard deviation, Spearman's rank, types of distribution and Price indexes.
Autumn year 3	Further Maths – introducing extension topics and new topics beyond the GCSE mathematics course.	Coordinate geometry Introductory Calculus Functions Sketching inequalities and functions Surds Rules of indices Equations of lines and circles Simultaneous equations Matrices	Knowledge acquisition will be developed through the building of prior knowledge, revisiting skills covered, and through regular quick fire assessments throughout the term.	work out the gradient of a line given two points on the line select two points on a given line to work out the gradient use the gradient of a line and a known point on the line to work out the co-ordinates of a different point on the line work out the gradients of lines that are parallel and perpendicular to a given line show that two lines are parallel or perpendicular using gradients recall the formula or use a sketch diagram to obtain the appropriate lengths of sides use the formula for the coordinates of the midpoint use a given ratio to work out coordinates of a point given two other points understand and use the notation dy dx	The concept of the inappropriate solution. Use of key words : Quadratic, solution, root, linear, solve, simultaneous, inequality, completing the square, factorise, rearrange, surd, function, solve, circle, sets, union, intersection Know that the quadratic formula can be used to solve	October half term GCSE Further Maths assessment with only content covered. December end of term assessment - GCSE Further Maths covers content studied only	High levels of maths knowledge are a prerequisite for this course, however students will have opportunities for stretch and challenge in all topics in Further Maths extending beyond the GCSE Maths course.

understand the concept of a rate of change work our gradients of curves and rate and the concept of a rate of change work our gradients of curves and rate of change of the gradient of a curve at a point given the gradient of a curve at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the tangent at a constant and n is an integer (including 0) simplify expressions before differentiating if necessary and that a function is a relation between two sets of values of the function when x = 2 solve equations that use function notation define the domain of a function and the domain of a function when x = 2 solve equations that use function notation define the domain of a function when x = 2 solve equations that use function notation define the domain of a function when x = 2 solve equations that use function is a variety of forms, for example (tg > 0, for all x occupt; = 0, for al	·		
understand the concept of a rate of change work out gradients of curves and rates of change understand the concept of the gradient of a curve state the gradient of a curve at a point given the gradient of requisition of the tangent at state the gradient of the august at a point given the gradient of the curve at that point work out gradients of curves and tangents find dy/sk, where y = ke' where k's a constant and is an integor (funduding 0) simplify expressions before differentiating if necessary understand that a function is a relation between two sasts of values of the substitute values into a function, for example (6) substitute values into a function, knowing that, (or example (72) as the value of the function when x = 2 solve equations that use function express a domain of a function orderine the domain of a function work out the range of a function express a domain to a variety of forms, for example x > 2, for all x except x = 0, for all read values or any property of the composite function [s], understand, therepret and use inverse function [s], understand, interpret and use inverse function [s], understand, the prove the condition of the turning point interpret and use inverse function [s], understand, the prove the condition of the turn			
understand the concept of a rate of change work out gradients of curves and rates of change understand the concept of the gradient of a curve state the gradient of a curve at a point given the gradient of requisition of the tangent at state the gradient of the august at a point given the gradient of the curve at that point work out gradients of curves and tangents find dy/sk, where y = ke' where k's a constant and is an integor (funduding 0) simplify expressions before differentiating if necessary understand that a function is a relation between two sasts of values of the substitute values into a function, for example (6) substitute values into a function, knowing that, (or example (72) as the value of the function when x = 2 solve equations that use function express a domain of a function orderine the domain of a function work out the range of a function express a domain to a variety of forms, for example x > 2, for all x except x = 0, for all read values or any property of the composite function [s], understand, therepret and use inverse function [s], understand, interpret and use inverse function [s], understand, the prove the condition of the turning point interpret and use inverse function [s], understand, the prove the condition of the turn		curve and often provides a	
work out gradients of curves and rates of change understand the concept of the gradient of a curve at a point, given the gradient of a curve at the gradient of a curve at a point, given the gradient or equation of the tangent at that point state the gradient of the curve at a point, given the gradient of the curve at a point given the state that gradient of the curve at a paint of the curve and tangents of the curve and tangents and dy first, where y = ket where k is a constant and n is an integer (including 0) simplify expressions before differentiating if necessary understand that a function is a relation between two sets of values understand and use function notation, for example (†2) substitute values into a function, knowing that, for example (†2) set woluse of the function where 2 solve equations that use function is a relation of curves and unation of curves an		understand the concept of a rate of change more efficient	
change understand the concept of the gradient of a curve state the gradient of a curve at a point given the gradient or equation of the tangent at that point state the gradient of the tangent at that point given the gradient of the tangent at point work our gradients of curves and tangents find dy dyd, where y = ke' a where k' is a constant and is an integer (including 0) simplify corposisions before diversating if necessary understand that a function is a relation but melessand and use function notation, for example [42] show the or the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function vork out the range of a function copress a domain in a warely of forms, for example [42] > 0, for all flyd except fly] = 1 understand, interpret and use of mosposite function [6x] understand, interpret and use inverse function [6x] understand and use function inverse function [6x] understand interpret and use inverse func			
understand the concept of the gradient of a curve state the gradient of a curve at a point give the gradient of cuture at a point give that parallel or creation of the tangent at that point state the gradient of the tangent at a point given the gradient of the tangent at a point given the gradient of the curve at that point work out gradients of curves and tangents find dy/dx, where y = ke' where k is a simplify expressions before differentiating if necessary understand that a function is a relation between two sets of values understand and use function notation, for example f(z) substitute values into a function, knowing that, for example f(z) is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function work out the range at a function work out the range at a function of example x ≥ 2 for all x except = 0, for all real values express range in a variety of forms, for example f(z) > 0, for all f(z) except f(z) = 1 understand interpret and use inverse function f(z) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning both			
state the gradient of a curve at a point given the gradient or equation of the tangent at that point state the gradient of the tangent at that point given the gradient of the tangent at the point given the gradient of the tangent at point given the gradient of the tangent at point work out gradients of curves and tangents find dy dyf, where y = x or where x is a constant and v is an integer (including) of simplify expressions before digrenation of the constant and v is an integer (including) of simplify expressions before digrenation of the constant and v is an integer (including) of simplify expressions before digrenation of the constant and v is an integer (including) of simplify expressions before due to see a very simplify and the constant of a constant and v is an integer (including) transformations and understand and use function notation, for example (x) as the constant is a function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function express a domain in a variety of forms, for example (x) = 0, for all (x) except (x) = 1 understand, interpret and use fine expression and the presental functions with up to 3 understand, interpret and use fine expression of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
state the gradient of a curve at a point given the gradient of equation of the tangent at that point state the gradient of the curve at that point given the gradient of the curve at that point work out gradients of curve at that point in curve at the point in curve at the point work out the curve at the point work out the curve at the point in curve at the point work out the curve at the point			
the gradient or equation of the tangent at a point state the gradient of the tangent at a point gradient of the tangent at a point work out gradients of curves and tangents find dy/kr, where y = k rever is a constant and n is an integer (including 0) simplify expressions before differentiating if nacessary understand that a function is a relation between two sets of values understand and use function notation, for example f(x) substitute values into a function, knowing that, for example f(x) is the value of the function when x = 2 solve equations that use function work out the range of a function express a domain in a variety of forms, for example ky 2 0, for all x except x = 0, for all real values express a range in a variety of forms, for example ky 2 0, for all x except x = 0, for all real values express a range in a variety of forms, for example ky 2 0, for all variety of the function work out the range domain in a variety of forms, for example ky 2 0, for all variety of forms for example f(x) 0, for all (x) except f(x) = 1 understand, interpret and use inverse function f'(x) draw or sketch targing films for films functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
that point state the gradient of the tangent at a point given the gradient of the curve and tangents work out gradients of curves and tangents find dy/dx, where y = ke' where k is a constant and n is an integer (including o) simplify expressions before differentiating if necessary understand that a function is a relation between two sets of values understand and use function notation, for example [tx] substitute values into a function, knowing that, for example [tz] is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function express a domain in a variety of forms, for example x > 2, for all x except x < 0, for all real values express a right of, for all (fa) except f(x) = 1 more than the function f(x) understand, interpret and use composite function f(x) understand, interpret and use inverse function f(x) draw or sketch graphs of finear, quantity and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmicting point			
given the gradient of the tangent at a point given the gradient of three gradient of three at charge to the produce motion on broduce motion on screen through the content of the produce motion on screen through transformations of simplify expressions before differentiating if necessary understand that a function is a relation between two sets of values understand and use function notation, for example f(z) substitute values into a function, knowing that, for example f(z) is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function work out the range of a function express a domain in a variety of forms, for example x > 2, for all x except x = 0, for all real values express a range in a variety of forms, for example x/y ≥ 0, for all f(x) except f(x) = 1 understand, interpret and use composite function fg(x) understand, interpret and use composite function ff(x) and an advanced to the condition of the proposite function ff(x) and an advanced to the proposite function ff(x) and advanced to the proposition function and advanced to the proposition function of the proposition function and the p			
given the gradient of the curve and tangents find dy/dx, where y = ke* where k is a constant and n is an expressions before differentiating if necessary understand that a function is a relation between two sets of values understand and use function notation, for example f(x) substitute values into a function, knowing that, for example (2) is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function example x > 2, for all x except x = 6, for all real values express a domain in a variety of forms, for example x > 2, for all x except x = 6, for all real values function fig. 1 understand, interpret and use inverse function f(x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
work out gradients of curves and tangents find dy/dx, where k is a constant and n is an integer (including 0) simplify expressions before differentiating if necessary understand that a function is a relation between two sets of values understand and use function notation, for example f(x) substitute values into a function, moving that, for example f(z) is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function express a domain in a variety of forms, for example x > 2, for a function when x = 1 understand, interpret and use composite function f'(x) understand, interpret and use composite function f'(x) understand, interpret and use composite function f'(x) draw or skelter graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand interpret son a quadratic graph and from this determine the coordinates of the turning point			
find dy/dx, where y = ke* where k is a constant and n is an integer (including 0) simplify expressions before differentiating if necessary understand that a function is a relation between two sets of values understand and use function notation, for example fts) substitute values into a function, knowing that, for example 18; substitute values into a function, knowing that, for example 18; and the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function work out the range of a function express a domain a variety of forms, for example x > 2, for all x except x = 0, for all real values express a range in a variety of forms, for example x > 2, for all x except x = 0, for all real values express a range in a variety of forms, for example ftsy > 0, for all ftsy except ftsy = 1 understand, interpret and use composite function fg(x) understand, interpret and use inverse function ff(x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the runing point			
constant and n is an integer (including 0) simplify expressions before differentiating if necessary understand that a function is a relation between two sets of values understand use function notation, for example f(x) substitute values into a function, knowing that, for example f(2) is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function express a domain in a variety of forms, for example x ≥ 1 and x except x = 0, for all real values express a range in a variety of forms, for example x ≥ 1 and x except x = 0, for all real values express a range in a variety of forms, for example f(x) ≥ 0, for all f(x) except f(x) = 1 understand, interpret and use composite function fg(x) understand, interpret and use inverse function f⁻¹(x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmittes on a quadratic graph and from this determine the coordinates of the turning point			
simplify expressions before differentiating if necessary understand that a function is a relation between two sets of values understand and use function notation, for example f(x) substitute values into a function, knowing that, for example f(2) is the value of the function when x = 2 function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function work out the range of a function work out the range of a function express a domain in a variety of forms, for example x > 2, for all t x except x = 0, for all real values express a range in a variety of forms, for example f(x) ≤ 0, for all f(x) except f(x) = 1 understand, interpret and use composite function fg(x) understand, interpret and use composite function if (x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any surfers on a quadratic graph and from this determine the coordinates of the turning point			
necessary understand that a function is a relation between two sets of values understand and use function, for example (f/x) substitute values into a function, knowing that, for example (f/z) is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function vork out the range of a function express a domain in a variety of forms, for example x > 2, for all x except x = 0, for all real values express a range in a variety of forms, for example x > 2, for all x except x = 0, for all real values express a range in a variety of forms, for example (f/x) ≤ 0, for all f(x) except f(x) = 1 understand, interpret and use composite function if (x) understand, interpret and use inverse function if (x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any minerties on a quadratic graph and from this determine the coordinates of the turning point			
understand that a function is a relation between two sets of values understand and use function notation, for example f(x) substitute values into a function, knowing that, for example f(2) is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function express a domain in a variety of forms, for example x > 2, for all x except x = 0, for all real values express a range in a variety of forms, for example f(x) ≤ 0, for all f(x) except f(x) = 1 understand, interpret and use composite function fg(x) understand, interpret and use composite function fg(x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify and quadratic graph and from this determine the coordinates of the turning point			
between two sets of values understand and use function notation, for example f(x) substitute values into a function, knowing that, for example f(2) is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function express a domain in a variety of forms, for example x > 2, for all x except x = 0, for all real values express a range in a variety of forms, for example f(x) ≤ 0, for all f(x) except f(x) = 1 understand, interpret and use composite function f(x) understand, interpret and use inverse function f '(x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
understand and use function notation, for example f(x) substitute values into a function, knowing that, for example f(2) is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function express a domain in a variety of forms, for example x ≥ for all x except x = 0, for all x except x = 0, for all x except x = 0 for all real values express a range in a variety of forms, for example f(x) ≤ 0, for all f(x) except f(x) = 1 understand, interpret and use composite function fg(x) understand, interpret and use inverse function f'(x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
example f(x) substitute values into a function, knowing that, for example f(2) is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function express a domain in a variety of forms, for example x > 2, for all x except x = 0, for all real values express a range in a variety of forms, for example f(x) \(\leq 0, for all f(x) \(\except f(x) = 1 \) understand, interpret and use composite function fg(x) understand, interpret and use inverse function f ¹ (x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
substitute values into a function, knowing that, for example f(2) is the value of the function when x = 2 solve equations that use function notation define the domain of a function work out the range of a function express a domain in a variety of forms, for example x > 2, for all x except x = 0, for all real values express a range in a variety of forms, for example f(x) ≤ 0, for all f(x) except f(x) = 1 understand, interpret and use composite function fg(x) understand, interpret and use inverse function f f'(x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
that, for example $f(Z)$ is the value of the function when $x=2$ solve equations that use function notation define the domain of a function work out the range of a function express a domain in a variety of forms, for example $x > 2$, for all			
function when x = 2 solve equations that use function define the domain of a function work out the range of a function express a domain in a variety of forms, for example x > 2, for all x except x = 0, for all real values express a range in a variety of forms, for example f(x) ≤ 0, for all f(x) except f(x) = 1 understand, interpret and use composite function fg(x) understand, interpret and use inverse function f'(x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
solve equations that use function notation define the domain of a function work out the range of a function express a domain in a variety of forms, for example $x > 2$, for all $x = x > 2$, for example $x > 2$, for all $x = x > 2$, for all			
define the domain of a function work out the range of a function express a domain in a variety of forms, for example $x > 2$, for all $x = 0$, for all real values express a range in a variety of forms, for example $f(x) \le 0$, for all $f(x) = 1$ understand, interpret and use composite function $f(x) = 0$ understand, interpret and use inverse function $f(x) = 0$ understand, interpret and use inverse function $f(x) = 0$ understand functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
work out the range of a function express a domain in a variety of forms, for example $x > 2$, for all $x = 0$, for all real values express a range in a variety of forms, for example $f(x) \le 0$, for all $f(x) = 0$ express a range in a variety of forms, for example $f(x) \le 0$, for all $f(x) = 0$ expect $f(x) = 1$ understand, interpret and use composite function $f(x) = 0$ understand, interpret and use inverse function $f(x) = 0$ understand, interpret and use inverse function $f(x) = 0$ draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
express a domain in a variety of forms, for example $x > 2$, for all $x = x > 0$, for all x			
example $x > 2$, for all x except $x = 0$, for all real values express a range in a variety of forms, for example $f(x) \le 0$, for all $f(x)$ except $f(x) = 1$ understand, interpret and use composite function $fg(x)$ understand, interpret and use inverse function $f^{-1}(x)$ draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
real values express a range in a variety of forms, for example $f(x) \le 0$, for all $f(x)$ except $f(x) = 1$ understand, interpret and use composite function $fg(x)$ understand, interpret and use inverse function $f^{-1}(x)$ draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
express a range in a variety of forms, for example $f(x) \le 0$, for all $f(x)$ except $f(x) = 1$ understand, interpret and use composite function $fg(x)$ understand, interpret and use inverse function $f^{-1}(x)$ draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
example $f(x) \le 0$, for all $f(x)$ except $f(x) = 1$ understand, interpret and use composite function $f(x)$ understand, interpret and use inverse function $f^{-1}(x)$ draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
understand, interpret and use composite function fg(x) understand, interpret and use inverse function f ⁻¹ (x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
function fg(x) understand, interpret and use inverse function f¹(x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
understand, interpret and use inverse function f ⁻¹ (x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
function f ⁻¹ (x) draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
draw or sketch graphs of linear, quadratic and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
and exponential functions with up to 3 domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
domains label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
label points of intersection of graphs with the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
the axes understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
understand that graphs should only be drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
drawn within the given domain identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
identify any symmetries on a quadratic graph and from this determine the coordinates of the turning point			
graph and from this determine the coordinates of the turning point			
coordinates of the turning point			
solve linear inequalities		solve linear inequalities	

solve quadratic inequalities
simplify expressions by manipulating surds
expand brackets which contain surds
rationalise the denominator, including
denominators in the form $a \sqrt{b} + c \sqrt{d}$ where
a, b, c and d are integers
understand the concept of using surds to
give an exact answer
simplify expressions involving fractional and
negative indices which may be written in a
variety of forms
solve equations involving expressions
involving fractional and negative indices
understand that, for example $x1/^n$ is
equivalent to the <i>n</i> th root of <i>x</i>
understand that, for example x^{-n} is
equivalent to 1
X ⁿ
work out the gradient and the intercepts
with the axes of a given equation or graph
work out the equation of a line using the
gradient and a known point on the line
work out the equation of a line using two
known points on the line
1 · · I
give equations in a particular form when instructed to do so
work out coordinates of the point of
intersection of two line draw a straight line
using a given gradient and a given point on
the line
draw a straight line using two given points
on the line
recognise the equation of a circle, centre (0,
0), radius r
write down the equation of a circle given
centre (0, 0) and radius
work out coordinates of points of
intersection of a given circle and a given
straight line
recognise the equation of a circle, centre (a,
b), radius r
write down the equation of a circle given
centre (a, b) and radius
work out coordinates of points of
intersection of a given circle and a given
straight line

				understand that the circle $(x-a)^2 + (y-b)^2 = r^2$ is a translation of the circle $x^2 + y^2 = r^2$ by the vector a b use the fact that the angle between the tangent and radius is 90° to work out the gradient of a tangent and hence the equation of a tangent at a given point solve two linear simultaneous equations using any valid method solve simultaneous equations where one is linear and one is second order using substitution or any other valid method solve three linear simultaneous equations using any valid algebraic method multiply a 2×2 matrix by a 2×1 matrix multiply a 2×2 matrix by a 2×2 matrix multiply 2×2 and 2×1 matrices by a scalar understand that, in general, matrix multiplication is not commutative understand that matrix multiplication is associative understand that AI = IA = A work out the image of any vertex of the unit square given the matrix operator work out or recall the matrix operator for a given transformation understand that the matrix product PQ represents the transformation with matrix Q followed by the transformation with matrix Q followed by the transformation with represents a combined transformation			
Spring year 3	Further Maths – introducing extension topics and new topics beyond the GCSE mathematics course	Trigonometry and Pythagoras Applications of calculus Sequences Factor Theorem Further Trigonometry	Knowledge acquisition will be developed through the building of prior knowledge, revisiting skills covered, and through regular quick fire assessments throughout the term.	work out any unknown side using two given sides identify appropriate right-angled triangles in 2 and 3 dimensional shapes and apply Pythagoras' theorem recognise and use Pythagorean triples identify appropriate right-angled triangles in 2 and 3 dimensional shapes and apply Pythagoras' theorem identify appropriate triangles in 2 and 3 dimensional shapes and apply trigonometry work out the angle between a line and a plane	Mathematics applied in different cultures such as Rangoli patterns, symmetry, tessellations and Islamic geometric patterns. Link to Ben Heine, Kandinsky (artists Use of key words: Triangle, right angle, angle, Pythagoras' Theorem, sine,	February half term – Full GCSE Further Maths paper. Easter – Full GCSE Further Maths paper	High levels of maths knowledge are a prerequisite for this course, however students will have opportunities for stretch and challenge in all topics in Further Maths extending beyond the GCSE Maths course.

Revision	Revision	work out the angle between two planes	cosino tan	1	1
